According to our (Global Info Research) latest study, the global Acrylonitrile-Butadiene-Styrene Resin market size was valued at USD 15960 million in 2023 and is forecast to a readjusted size of USD 19970 million by 2030 with a CAGR of 3.3% during review period.

ABS is a kind of polymer obtained through the copolymerization of three kinds of monomers, namely acrylonitrile, butadiene and styrene. Each of these three monomers has a specific property: the addition of acrylonitrile can improve the anti-corrosion and rigidity properties, butadiene promotes the shock resistance and styrene will contribute the material good fineness. It is among the low cost engineering plastic that is easy to machine and fabricate. ABS is an ideal material for structural applications when impact resistance, strength, and stiffness are required. It is widely used for machining pre-production prototypes such as the auto dashboard since it has excellent dimensional stability and is easy to paint and glue. Natural (beige) ABS and black ABS are FDA compliant for use in food processing applications. Besides, it is widely used in the toys and electron industries including the PC enclosure.

The main application of acrylonitrile butadiene styrene (ABS) are washing machine, fridge, PC, car, toys, electronics fields. In terms of product, acrylonitrile butadiene styrene (ABS) can be divided into two types: general purpose ABS and specialty ABS. The general purpose ABS holds a share about 79%. The major manufacturers in the world include LG Chem, Formosa, CHIMEI. etc. The biggest manufacturer is LG Chem, which holds a share about 15%.
