Abstracts

According to our (Global Info Research) latest study, the global Activated Alumina Microsphere market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Activated alumina is aluminum oxide in the form of very porous spheres that are literally “tunneled” at the microscopic level. This makes them handy for a number of different jobs. Microspheres are small spherical particles with diameters from 1 to 1000 μ m.

Activated alumina is manufactured from aluminium hydroxide by dehydroxylating it in a way that produces a highly porous material. This material can have a surface area significantly over 200 m^2/g . The compound is used as a desiccant (to keep things dry by adsorbing water from the air) and as a filter of fluoride, arsenic and selenium in drinking water.

The Global Info Research report includes an overview of the development of the Activated Alumina Microsphere industry chain, the market status of Adsorbent (
