Abstracts

The global Activated Alumina Microsphere market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Activated alumina is aluminum oxide in the form of very porous spheres that are literally “tunneled” at the microscopic level. This makes them handy for a number of different jobs. Microspheres are small spherical particles with diameters from 1 to 1000 μ m.

Activated alumina is manufactured from aluminium hydroxide by dehydroxylating it in a way that produces a highly porous material. This material can have a surface area significantly over 200 m^2/g . The compound is used as a desiccant (to keep things dry by adsorbing water from the air) and as a filter of fluoride, arsenic and selenium in drinking water.

This report studies the global Activated Alumina Microsphere production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Activated Alumina Microsphere, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
