Abstracts

According to our (Global Info Research) latest study, the global Activated Carbon Fiber (ACF) market size was valued at US\$ 399 million in 2024 and is forecast to a readjusted size of USD 534 million by 2031 with a CAGR of 4.3% during review period.

Activated carbon fiber is a type of carbonated fiber that is made of cellulosic, PAN, phenolic, and pitch fibers, and it is new type advanced material, which is different from granular or powder activated carbon. ACF's diameter is approximately 5 to 30 μm which is very fine compared to granular activated carbon (grain diameter 500 to 5000 μm), and it has larger surface area. Since ACF's pore diameter is approximately 15 to 20 μm and most of pores are micro pores, the speed of adsorption and desorption is fast. Moreover, it has excellent for adsorption in low concentration.

Global key players of activated carbon fiber (ACF) include Toyobo, Kuraray, Unitika, etc. The top three players hold a share about 70%. Asia-Pacific is the largest market, has a share about 78%, followed by North America and Europe, with share 9% and 8%, separately.

ACF can be divided into viscose staple based, cellulosic fiber based, phenolic resin based, pitch based and others. PAN product used to have a market share of 4%, but due to the low product performance, and easy to hurt workers' hands during production, now China players choose to reduce or stop the production of this type product, especially from the Y2016. Pitch based product is relatively expensive in this industry, China players do not produce this type of product, it is mainly produced by Japan players.
