Abstracts

According to our (Global Info Research) latest study, the global Activated Manganese Dioxide market size was valued at US\$ 116 million in 2025 and is forecast to a readjusted size of US\$ 164 million by 2032 with a CAGR of 5.1% during review period.

In 2025, global sales volume of Activated Manganese Dioxide was approximately 23,000 tons, with an enterprise-side average selling price of about US\$4,900 per ton. The gross margin of major manufacturers was approximately 25%-40%.

Activated Manganese Dioxide is a manganese-based functional powder material mainly composed of MnO_2 , produced through activation treatment or characterized by high surface reactivity. It is usually available in black or dark brown powder or granular form. Compared with ordinary natural manganese dioxide, Activated Manganese Dioxide places greater emphasis on pore structure, specific surface area, redox activity, catalytic activity, and discharge performance. It can provide strong electron-transfer capability and surface activity in different reaction systems. The product can be produced from natural manganese ore through roasting, acid treatment, oxidation, crushing, and classification, or prepared through manganese salt chemical reactions, precipitation oxidation, and modified composite processes. It is a more functionalized and refined product within the broader manganese dioxide category.

The upstream raw materials of Activated Manganese Dioxide mainly include natural manganese dioxide ore, pyrolusite, manganese sulfate, manganese nitrate, potassium permanganate, and other manganese sources, as well as acids, alkalis, oxidants, reducing agents, additives, and crushing/classification equipment. Raw material purity, manganese content, impurity control, and activation process directly affect product

activity, particle size, specific surface area, and stability. The midstream segment covers preparation, activation, washing, drying, crushing, classification, and packaging of Activated Manganese Dioxide. Downstream applications mainly include battery materials, chemical synthesis, environmental catalysis, sealant materials, and industrial oxidants.
