Activated mineral desiccant is a natural mineral moisture-proof agent made from natural attapulgite clay as the main raw material, processed through physical treatments such as grinding, activation, granulation, and drying. It boasts advantages such as high moisture absorption, non-toxicity, environmental friendliness, biodegradability, and low cost. It is widely used in industries such as electronics, food, and clothing, and is an ideal environmentally friendly alternative to traditional desiccants like silica gel.

The upstream industry focuses on the mining and processing of natural minerals, with the main raw materials including attapulgite, montmorillonite, and activated clay.

In 2025, global sales are projected to be approximately 128,000 tons, with an average market price of approximately US\$349 per ton. The industry's gross profit margin is in the range of 10%?25%.
