## Abstracts

According to our (Global Info Research) latest study, the global Activated Polyethylene Glycol (PEG) market size was valued at US\$ 362 million in 2025 and is forecast to a readjusted size of US\$ 1774 million by 2032 with a CAGR of 25.8% during review period.

PEGs have been shown to provide improved water solubility and biocompatibility in drugs and other applications, and the ability to attach a variety of reactive functional groups to the terminal positions of these polymers has greatly increased their utility. Poly(ethylene glycol) (PEG) is a synthetic, hydrophilic, biocompatible polymer with widespread use in biomedical and other applications. PEGs are synthesized using a ring-opening polymerization of ethylene oxide to produce a broad range of molecular weights and molecular weight distributions (polydispersity); however, discrete PEGs (dPEG®) are synthesized with a single, specific molecular weight. PEGs can be synthesized in linear, branched, Y-shaped, or multi-arm geometries. PEGs can be activated by the replacement of the terminal hydroxyl end group with a variety of reactive functional end groups enabling crosslinking and conjugation chemistries.

Global activated polyethylene glycol (PEG) key players include NOF, JenKem Technology, Nektar Therapeutics, Dr. Reddy's Laboratories, Merck, etc. Global top 2 manufacturers hold a share about 50%. North America is the largest market, with a share about 40%, followed by Asia Pacific and Europe, both have a share over 57 percent. In terms of product, linear PEGs is the largest segment, with a share over 55%. And in terms of application, the largest application is pharmaceutical industry, followed by medical equipment.
