Active core alignment fusion splicer is a high-precision device used for fiber fusion splicing in fiber optic communications. It automatically detects and accurately aligns the core position of the optical fiber to achieve low-loss, high-quality fusion splicing. The device uses image processing technology and servo control system to make real-time adjustments based on the slight offset of the optical fiber core, significantly improving the fusion accuracy, especially for single-mode optical fiber. Active Core Alignment Fusion Splicer is widely used in backbone networks, data centers, FTTx deployments, and optical communication projects with high reliability requirements. It is one of the indispensable core devices in modern optical fiber cabling
