Abstracts

According to our (Global Info Research) latest study, the global Active Crossovers market size was valued at US\$ 669 million in 2025 and is forecast to a readjusted size of US\$ 1021 million by 2032 with a CAGR of 6.2% during review period.

In 2025, global Active Crossover output reached about 5 million units and global capacity of around 6 million units. The average price is about USD 130 per unit, with gross margins near 39%. An Active Crossover is an electronic audio signal processing device that divides a full-range audio signal into two or more frequency bands (such as low, mid, and high frequencies) before power amplification, allowing each frequency band to be sent to a dedicated power amplifier and loudspeaker driver for improved sound quality, efficiency, and system control. Unlike passive crossovers, which operate after amplification using inductors and capacitors, active crossovers use analog or digital electronic circuits (often based on operational amplifiers, DSPs, and digital filters) to provide adjustable crossover frequencies, filter slopes, phase alignment, delay, and equalization. They are widely used in professional sound reinforcement, studio monitoring, cinema audio, installed sound systems, automotive audio, and high-end home audio. The supply chain begins with upstream suppliers of semiconductor components (DSP chips, operational amplifiers, ADCs/DACs, microcontrollers, clock ICs, power management ICs), passive electronic components (resistors, capacitors, inductors), connectors, PCBs, metal enclosures, displays, and power supplies. Midstream manufacturers design, develop, assemble, program, calibrate, and test standalone active crossovers, loudspeaker management processors, and integrated DSP crossover systems. Downstream distribution occurs through professional audio equipment distributors, system integrators, OEM loudspeaker manufacturers, AV installers, and online sales channels, ultimately serving end users including concert and

touring companies, recording studios, broadcasters, cinemas, commercial buildings, houses of worship, educational institutions, hospitality venues, and audiophile consumers.
