Active indoor distributed antenna system is a communication system that uses active equipment (such as signal amplifiers, optical fiber transmission equipment, etc.) to extend wireless signals to various areas inside a building. It is mainly used to achieve stable and uniform coverage of wireless communication signals in indoor spaces. It is usually used in large venues, office buildings, hospitals, airports and other places, especially in areas where wireless signals cannot reach due to obstacles such as walls and floors. Active DAS can effectively solve the problem of weak or unstable signals.
