## Abstracts

Modified atmospheric packaging is used to pack fresh-cut fruits and vegetables. This is being done to achieve the fresh-like quality product with high nutritional value. Active and modified atmospheric packaging is considered as a new solution for food packaging.

### SCOPE OF THE REPORT:

This report studies the Active and Modified Atmospheric Packaging market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Active and Modified Atmospheric Packaging market by product type and applications/end industries.

Active and modified atmospheric packaging is growing at a faster phase and is widely used in both fresh and dry food packaging. The main objective of this type of packaging is to maintain the quality and freshness of the food for a long time. Two kinds of modified packaging are done, one is active and another is passive. Active modified atmospheric packaging involves displacement of gases and replacing it with the desired mixture of gases.

The biggest reason for using modified atmospheric packaging is that it decreases the exposure of food to oxygen and protects it from spoilage, discoloration, and helps in maintaining flavors and texture of the food for a long time. Active modified atmospheric packaging is used on a large scale as it is a good barrier for moisture and oxygen, thereby increasing the shelf-life of the food in the active modified atmospheric package. Moreover, the modified atmospheric packaging is also finding large application in packing fresh cut fruits and vegetables.

The global Active and Modified Atmospheric Packaging market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Active and Modified Atmospheric Packaging.
