According to our (Global Info Research) latest study, the global Active and Passive Electronic Component market size was valued at US\$ 529050 million in 2025 and is forecast to a readjusted size of US\$ 758510 million by 2032 with a CAGR of 5.3% during review period.

Active and Passive Electronic Components are two major categories within the electronics industry, each playing a crucial role in electronic circuit design.

The fundamental difference between active and passive components is their ability to amplify signals or power. Active components can introduce energy into a circuit, making them essential for any electronic device that requires signal processing, computing, or amplification. Passive components, on the other hand, are crucial for managing current flow, filtering signals, and storing energy, making them indispensable in both simple and complex electronic circuits.

Both active and passive components are essential for the creation of electronic devices, from the simplest gadgets to the most complex computing systems. Their functions complement each other, with active components relying on passive components to shape and control the electrical signals they amplify or process.

Global key players of Active and Passive Electronic Component include Infineon Technologies, STMicroelectronics, Texas Instruments, etc. The top three players hold a share over 11%. Asia-Pacific is the largest market, has a share about 66%, followed by Europe and North America, with share 11% and 16%, separately. In terms of product type, active electronic component is the largest segment, occupied for a share of 70%.
