Abstracts

The global Active Protection Network market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The active protection net protects the slope surface, inhibits collapse, weathering, peeling, and sliding, and limits the movement range of local or small rockfalls. It is used when there are small rockfalls or high-quality slopes. It can meet the anti-corrosion life requirements of up to 100 years, but its reinforcement capacity is only about 70%-80%, which is not suitable for large pieces of lone stone with a volume larger than 1m³.

This report studies the global Active Protection Network production, demand, key manufacturers, and key regions.
