## Abstracts

This report studies the Active Protection System market, Active Protection Systems (APSs) are subsystems integrated into or installed on a combat vehicle to automatically acquire, track, and respond with hard or soft kill capabilities to a variety of threats, including rocket-propelled grenades (RPGs) and anti-tank guided missiles (ATGMs). APS technologies are not new, and a number of nations have already employed APS on the battlefield.

The proliferation of advanced RPGs and ATGMs is of concern to some defense officials and policymakers. These weapons—RPGs in particular—have been particularly popular with insurgents because they are readily available, relatively inexpensive, and require little training. Technical and operational challenges to APS include being able to work under extremely demanding circumstances and compressed timelines, robustness against countermeasures, minimizing the threat to friendly forces and civilians, being compatible with the space and power allocated to it on the vehicle, and affordability.

According to our (Global Info Research) latest study, the global Active Protection System market size was valued at US\$ 4233 million in 2023 and is forecast to a readjusted size of USD 6400 million by 2030 with a CAGR of 6.2% during review period.
