Abstracts

According to our (Global Info Research) latest study, the global Active RFID Tags market size was valued at USD 3626.4 million in 2023 and is forecast to a readjusted size of USD 6062.6 million by 2030 with a CAGR of 7.6% during review period.

This report focus on Active RFID Tags market. Active RFID systems use battery-powered RFID tags that continuously broadcast their own signal. Active RFID tags are commonly used as “beacons” to accurately track the real-time location of assets or in high-speed environments such as tolling. Active tags provide a much longer read range than passive tags, but they are also much more expensive.

There are two main frequencies used by active systems – 433 MHz and 915 MHz. User preference, tag selection, or environmental considerations usually dictate which frequency to use for most applications. Companies generally favor RFID systems that operate on the 433 MHz because it has a longer wavelength enabling it to work a little better with non-RF friendly materials like metal and water.

The Global Info Research report includes an overview of the development of the Active RFID Tags industry chain, the market status of Health Care (Transponders, Beacons), Logistics and Transportation (Transponders, Beacons), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Active RFID Tags.

Regionally, the report analyzes the Active RFID Tags markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness. Asia-Pacific, particularly China, leads the global
