According to our (Global Info Research) latest study, the global Active Sound Design DSP market size was valued at US\$ 169 million in 2025 and is forecast to a readjusted size of US\$ 328 million by 2032 with a CAGR of 10.1% during review period.

Active Sound Design DSP refers to the use of Digital Signal Processing (DSP) technology to actively create and modify engine sounds within a vehicle. It is a system used to simulate, enhance, or modify the sound of a vehicle's engine, especially in electric vehicles (EVs) or hybrid vehicles, which typically lack the characteristic noise of traditional internal combustion engines (ICEs). By leveraging DSP, an Active Sound Design system can generate engine-like sounds that improve user experience, offer safety features, and provide the auditory feedback usually associated with a combustion engine.
