According to our (Global Info Research) latest study, the global ADAM23 Polyclonal Antibody market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

ADAM23 is a non-catalytic metalloprotein protein that is highly expressed in the brain, especially in the amygdala, caudate nucleus, hypothalamus, thalamus, cerebral cortex and occipital bone, and weakly expressed in the heart. ADAM23 may play a role in the interaction between cells and cell matrix. ADAM23 polyclonal antibody refers to a mixture of multiple antibodies that are isolated from the serum of immunized animals after immunizing animals with antigens containing multiple antigenic determinants of ADAM23 protein, and can specifically recognize and bind to multiple different antigenic epitopes on ADAM23 protein.

As an important tool in life science research, ADAM23 polyclonal antibody has a wide range of applications in biomedical research, drug development, clinical diagnosis and other fields. Its ability to specifically bind to ADAM23 antigen makes it an important tool for studying the function, expression regulation and related disease mechanisms of ADAM23 protein. With the continuous deepening of life science research and the rapid development of the biopharmaceutical industry, the demand for high-quality and highly specific ADAM23 polyclonal antibodies continues to grow. This growth trend has prompted relevant suppliers to increase their R&D investment and improve product quality and service levels. In summary, the ADAM23 polyclonal antibody market has broad development prospects and huge market potential.
