Abstracts

According to our (Global Info Research) latest study, the global Adaptive Driving Beam (ADB) Module market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The driver can always drive the vehicle with the high beam on, and to other drivers or pedestrians on the road, the impact of the high beam light will be the same as the low beam light. This is because vehicles equipped with the Anti-Dazzle Smart High Beam (ADB/AFS) system use integrated cameras to identify and screen other vehicles to avoid glare. With this technology, obstacles, pedestrians or animals on the road can also be detected and selectively illuminated to further improve safety. These ADB headlight modules or multi-pixel single matrix headlight LED modules not only eliminate glare from oncoming vehicles but also enable car2x communications by projecting warning symbols on the road.
