Abstracts

Adaptive security is an integrated design of software and hardware to secure the basic infrastructure against malwares. It has become more widely used in response to a rapidly changing DevOps environment and interconnectedness of everything (i.e. IoT). Adaptive security adapts to the environment in order to protect the computing environment. An adaptive security system should have intelligent and flexible strategies that can deal with high volumes of security data. It should be smart enough to make decisions and respond to within seconds whenever there is an abnormal behavior.
