ADAS is a system that integrates multiple forward-looking sensors (such as cameras and radars) for the realization of autonomous driving and advanced driver assistance systems (ADAS). It can process data from different sensors and provide functions such as lane keeping, adaptive cruise control, and collision warning. On the highway, the forward-looking integrated machine monitors lane lines, traffic signs, and vehicles ahead in real time through cameras and radars to achieve adaptive cruise control and lane keeping functions. As an important carrier of intelligent driving, the popularization of ADAS is a prerequisite for the realization of autonomous driving in the future, and the forward-looking integrated machine is one of the key components in the ADAS system.
