Abstracts

According to our (Global Info Research) latest study, the global ADAS Targets market size was valued at US\$ 368 million in 2025 and is forecast to a readjusted size of US\$ 726 million by 2032 with a CAGR of 10.2% during review period.

ADAS Targets are standardized test objects specifically designed for autonomous driving, ADAS (Advanced Driver Assistance Systems), and crash simulation testing. They are typically soft, movable simulated objects that mimic the behavior of pedestrians, cyclists, or other road users, used to validate the perception, decision-making, and control performance of autonomous vehicles. These products provide repeatable and quantifiable data, supporting accurate identification of vehicle sensors, collision warnings, and automatic braking functions, ensuring the safety and realism of the test environment. In 2025, ADAS Targets shipped approximately 23,800 units globally, with an average price of approximately US\$15,000 per unit and a gross margin of approximately 40%.

The rapid development of autonomous driving and ADAS technologies has significantly increased demand for high-precision, repeatable test targets. Soft targets provide a safe and controllable testing environment in both lab and field conditions, serving as critical infrastructure for autonomous vehicle and ADAS development.

Developing and manufacturing soft targets require high-precision materials, flexible designs, and quantifiable behavior simulation. The technical barrier is high, and small-to-medium enterprises may struggle to scale, resulting in higher product costs that could slow adoption.

Primarily used for passenger and commercial vehicle autonomous driving testing. Other

applications include traffic safety assessment, collision simulation, and intelligent transportation system integration. Demand is expected to expand further as L3+ autonomous vehicles undergo more comprehensive testing.
