## Abstracts

According to our (Global Info Research) latest study, the global Additive Manufacturing Systems with Metal Powder market size was valued at USD 2263.7 million in 2023 and is forecast to a readjusted size of USD 7844 million by 2030 with a CAGR of 19.4% during review period.

Additive Manufacturing Systems with Metal Powders also known as Metal 3D printing equipment, can produce metallic products through three - dimensional and printing technology. Now it is widely used in automotive industry, aerospace industry and medical industry. Metal 3D printer works by laying down metal powder. A high powered laser then melts that powder in certain precise locations based on a CAD file. Once one layer is melted, the printer will place another layer of metal powder on top, and the process repeats until an entire object is fabricated.

Asia-Pacific is the fastest growing market.
