Abstracts

The global Additive Manufacturing with Metal Powders market size is expected to reach \$ 5775 million by 2032, rising at a market growth of 16.7% CAGR during the forecast period (2026-2032).

Additive Manufacturing with Metal Powders can produce metallic products through three - dimensional and printing technology. Now it is widely used in automotive industry, aerospace industry and medical industry. 3D printing of metals works by laying down metal powder. A high powered laser then melts that powder in certain precise locations based on a CAD file. Once one layer is melted, the printer will place another layer of metal powder on top, and the process repeats until an entire object is fabricated.

Global Additive Manufacturing with Metal Powders key players include EOS GmbH, GE, 3D Systems, SLM Solutions Group AG, Renishaw plc., etc. Global top five manufacturers hold a share over 40%.

Europe is the largest market, with a share over 35%, followed by Asia-Pacific, and North America, both have a share about 60 percent.

In terms of product, Selective Laser Melting (SLM) is the largest segment, with a share over 70%. And in terms of application, the largest application is Aerospace and Defense, followed by Automotive Industrial, Healthcare and Dental, Industrial, etc.

This report studies the global Additive Manufacturing with Metal Powders production, demand, key manufacturers, and key regions.
