## Abstracts

According to our (Global Info Research) latest study, the global Additive Metal Powder Atomization Plant market size was valued at USD 2205 million in 2023 and is forecast to a readjusted size of USD 3385.4 million by 2030 with a CAGR of 6.3% during review period.

Additive metal powder atomization is a process used to produce fine metal powders with specific characteristics, there are many methods to produce metal powders from valuable metals and alloys such as titanium, aluminum, stainless steel, iron, copper, nickel-based alloys and cobalt-based alloys. Atomization is generally viewed as the method of choice due to the geometrical properties of the powder particles that can be achieved. This makes it ideal for additive manufacturing (AM). In the atomization process, the melted metal alloys are first refined and degassed, then poured into a gas nozzle, where the liquid material is disintegrated into metal powder by a high-pressure gas stream. Gas atomization, water atomization and direct reduction all rely on industrial gases and gas technologies. Gas atomization requires argon and nitrogen, whereas a hydrogen atmosphere is needed for water atomization followed by oxide reduction.

The market trend for additive manufacturing powder atomization devices is very positive. With the continuous development of 3D printing and additive manufacturing technologies, there is an increasing demand for powder atomization devices. These devices are crucial for atomizing metal powders into the materials required for 3D printing, making them essential in the manufacturing industry. As the demand for customized and complex components grows across various industries, the market for additive manufacturing powder atomization devices is expected to expand.

Furthermore, with advancements in materials science and engineering technology, the performance and efficiency of powder atomization devices are continuously improving, further driving market growth. Overall, the market trend for additive manufacturing powder atomization devices is very optimistic.
