## Abstracts

According to our (Global Info Research) latest study, the global Addressable Dedicated LED market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Addressable dedicated LEDs, also known as digitally controllable LEDs, are LED products that have the ability to independently control each LED bead. Different from traditional ordinary LEDs, addressable dedicated LEDs can independently control the brightness and color of each LED lamp bead through digital control signals, so as to achieve colorful light effects and dynamic effects. Addressable dedicated LEDs usually include one or more LED lamp beads, and a circuit integrated with a control chip (such as WS2812, APA102, SK6812, etc.). The control chip is responsible for receiving external digital control signals and analyzing the signals into control instructions for each LED lamp bead, thereby realizing independent control of the LED lamp bead. Addressable dedicated LEDs are generally controlled using serial interfaces (such as SPI, I2C, etc.), which can be easily connected to microcontrollers, controllers, or other digital devices. Addressable dedicated LEDs are widely used in LED lighting, lighting, decoration, billboards, stage lighting, festival lighting and other occasions, and can achieve a variety of colorful light effects and dynamic effects, such as rainbow gradients, water effects, flickering, breathing lights effects etc. The independent control capability of addressable dedicated LEDs makes LED lighting and display more flexible, creative and diverse, providing rich possibilities for creative lighting design and interactive light effect applications.
