## Abstracts

The global Adeno-associated Virus Packaging Service market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Adeno-Associated Virus (AAV) Packaging Service refers to a specialized service that provides the packaging of genetic material into AAV vectors. AAVs are commonly used in gene therapy and gene delivery applications due to their ability to efficiently deliver genetic material to target cells. However, AAV vectors need to be packaged with the desired genetic cargo before they can be used for research or therapeutic purposes. The AAV packaging service allows researchers and pharmaceutical companies to obtain high-quality AAV vectors without the need for extensive expertise or infrastructure for vector production. It enables efficient and reliable delivery of genetic material, facilitating various applications in gene therapy, gene editing, and gene expression regulation.
