## Abstracts

According to our (Global Info Research) latest study, the global Adenosine Deaminase Deficiency market size was valued at USD 135.3 million in 2023 and is forecast to a readjusted size of USD 178.3 million by 2030 with a CAGR of 4.0% during review period.

Adenosine deaminase deficiency is an autosomal recessive metabolic disorder that causes immunodeficiency. It occurs in fewer than one in 100,000 live births worldwide.

The market driver for Adenosine Deaminase Deficiency (ADA) therapeutic products is the critical need to address this rare and life-threatening genetic disorder. ADA-SCID severely compromises the immune system, making effective treatment essential. Gene therapies and enzyme replacement therapies have shown promise in restoring immune function, driving market growth. However, challenges include limited patient population, high treatment costs, and the need for early and accurate diagnosis. Additionally, access to these specialized therapies and regulatory hurdles pose challenges. Despite challenges, the ADA therapeutic market presents opportunities for further research and development, offering hope for improved outcomes for patients with this devastating condition.
