According to our (Global Info Research) latest study, the global Adhesive-Laminated Motor Core market size was valued at US\$ 1898 million in 2025 and is forecast to a readjusted size of US\$ 4187 million by 2032 with a CAGR of 11.6% during review period.

Adhesive-Laminated Motor Cores are motor components where the layers of the motor core are bonded together using adhesives. Unlike traditional core manufacturing methods, adhesive-bonded cores do not use welding or mechanical connections. Instead, advanced bonding processes connect the various parts of the core together, achieving higher precision and better mechanical strength. This bonding technology reduces core losses and improves motor efficiency, especially during high-frequency operation. Common adhesives include epoxy resins and polyurethanes, which provide good electrical insulation and strength. In 2025, global production of Adhesive-Laminated Motor Cores reached approximately 17.06 million units, with an average price of US\$108.1 per unit and a gross profit margin of approximately 20.43%. Downstream customers include domestic and international automotive parts manufacturers, vehicle manufacturers, and motor manufacturers, such as Valeo, Bosch Group, Aldor Group, Inovance Technology, and BYD. Production Capacity: Mitsui High Tec Inc. supplies more than 1.6 million motor cores annually for automotive applications.

Electric Vehicle Market Growth: With the increasing demand for electric vehicles, especially high-end electric vehicles, the market demand for Adhesive-Laminated Motor Cores, as a high-efficiency solution, will further increase. Performance Requirements: Electric vehicles place increasingly higher demands on drive motors, and Adhesive-

Laminated Motor Cores offer lower energy loss and efficient thermal management, contributing to improved overall motor performance. Manufacturing Technology Advancements: Continuous optimization of bonding technology has led to gradually decreasing production costs, enabling the application of Adhesive-Laminated Motor Cores in more fields, particularly in applications requiring lightweight and high-efficiency motors.
