The global Adjustable Dose Electronic Syringe market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

An adjustable dose electronic syringe is a device that allows the user to select and deliver a precise dose of a liquid drug, such as insulin, growth hormone, or epinephrine. It consists of a syringe, a battery-powered motor, a dose selector, and a display. The user can adjust the dose by rotating the dose selector, which shows the selected dose on the display. The user then presses a button to activate the motor, which pushes the plunger of the syringe and injects the drug into the body. The device can be either disposable or reusable, depending on the design and the drug compatibility.
