According to our (Global Info Research) latest study, the global Adjustable Focus Liquid Lens market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The adjustable focus liquid lens is a lens based on the principle of liquid crystal or current control electronic technology, which can adjust the focal length by changing the shape and refractive index of the liquid medium.

The adjustable focus liquid lens uses current control or electric field effect to change the shape and distribution of liquid in the liquid crystal layer, changing the curvature and refractive index of the lens. By applying different voltages to the liquid crystal layer, the focal length of the imaging can be controlled to realize the adjustment of the focal length. The adjustable focus liquid lens has the characteristics of fast response, convenience, power saving and high precision.
