Abstracts

ADME testing refers to the pharmacokinetic testing of a compound in living organism and known as ADME/Tox. Drug development is a cost and time intensive process. The traditional drug development process includes toxicity and efficacy testing in in-vivo environment which is responsible for late stage failure of drugs in human body, as the results observed in animal models and human are different. To overcome this drug failure hurdle drug manufacturers are incorporating ADME toxicity testing in early drug developmental phases.

According to our (Global Info Research) latest study, the global ADME Toxicology Testing market size was valued at USD 4602 million in 2022 and is forecast to a readjusted size of USD 8324.9 million by 2029 with a CAGR of 8.8% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Geographically, North America is expected to have the largest market share in terms of revenue followed by Europe during the forecast period. Larger base of drug manufacturing organizations coupled with supportive government regulations pertaining to drug development are key drivers for the growth of this regional market. Additionally, increasing R&D investments related to drug discovery is also expected to propel growth of this market. Asia Pacific is expected to have a lucrative growth owing to rapidly improving healthcare infrastructure, rising spending in healthcare & diagnostic centers, increasing patient awareness levels and increased access to healthcare services in the emerging economies of India and China.
