Abstracts

ADS-B is an Automatic Dependent Surveillance-Broadcast system, an integral part for air traffic control. The ADS-B broadcasts important information such as aircraft velocity, position, and altitude at a set time intervals. The ADS-B functions by using a transponder to send accurate details of position to air traffic controllers. The ADS-B works by determining its position using GPS which is then broadcasted by transponder at intervals.

SCOPE OF THE REPORT:

This report focuses on the ADS-B in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The ADS-B is operable in remote areas, on mountain side, low or very high altitudes, thus offers an additive advantage over the conventional ones. These features of ADS-B benefits the users to great extent allowing them to control traffic even of runaways, is one of the major factor driving the global ADS-B market. The ADS-B technology offers improved efficiency and safety to pilots, controllers and also to public. Further, it offers information on weather conditions, prevents the runaway incursions even at heavy rainfall and provide information to pilots which earlier only controllers used to get. These factors are expected to drive the global ADS-B market during the forecast period.

The worldwide market for ADS-B is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
