According to our (Global Info Research) latest study, the global ADS-B market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

ADS-B is an Automatic Dependent Surveillance–Broadcast system, an integral part for air traffic control. The ADS-B broadcasts important information such as aircraft velocity, position, and altitude at a set time intervals. The ADS-B functions by using a transponder to send accurate details of position to air traffic controllers. The ADS-B works by determining its position using GPS which is then broadcasted by transponder at intervals.

The ADS-B is operable in remote areas, on mountain side, low or very high altitudes, thus offers an additive advantage over the conventional ones. These features of ADS-B benefits the users to great extent allowing them to control traffic even of runaways, is one of the major factor driving the global ADS-B market. The ADS-B technology offers improved efficiency and safety to pilots, controllers and also to public. Further, it offers information on weather conditions, prevents the runaway incursions even at heavy rainfall and provide information to pilots which earlier only controllers used to get. These factors are expected to drive the global ADS-B market during the forecast period.
