ADSS (All-Dielectric Self-Supporting) Aerial Cable is a fiber optic cable designed for long-distance communication applications in high-voltage environments such as power lines. It has no metal components and its all-dielectric design gives it the advantage of self-supporting installation in high-voltage environments, avoiding the problems caused by induced currents. The structure of ADSS optical cable usually includes an all-dielectric outer sheath and a central tube containing optical fibers. It can withstand various weather conditions and is suitable for hanging on poles or high-voltage transmission towers. It is widely used by power companies and telecommunications companies to build power communication networks and metropolitan area networks.
