The adult dairy spray drying system is a key equipment system in the field of food processing. It is dedicated to converting liquid dairy products (such as milk, formula milk base liquid) into powdered finished products through processes such as atomization, heat exchange, and gas-solid separation. Its core goal is to achieve efficient dehydration, retain nutritional active ingredients, and meet specific physical and chemical indicators of adult dairy products (such as solubility and particle size distribution). The system must comply with national food safety standards (such as GB 19644 'Milk Powder') and is the core technical equipment for the dairy industry to transform from liquid to solid.
