An adult soft nasal cannula is a medical device used to deliver supplemental oxygen to patients in need. It consists of two small prongs that are inserted into the patient's nostrils and are connected via tubing to an oxygen source. Soft nasal cannulas are designed for patient comfort, with soft, pliable prongs made from materials such as silicone or foam. The prongs are shaped to fit snugly into the nasal passages without causing discomfort or irritation. The plastic tubing that connects the cannula to the oxygen source is typically between 7-8 feet long, allowing for freedom of movement while receiving oxygen therapy.
