Advanced Air Mobility (AAM) refers to an emerging mode of air transportation that aims to use innovative aircraft and technologies to improve the efficiency of air traffic between cities and regions. AAM usually involves electric vertical take-off and landing (eVTOL) aircraft, drones and other advanced aircraft, aiming to achieve fast, environmentally friendly and efficient air transportation. In the context of AAM, 'Material' usually refers to the various materials and technologies related to these advanced aircraft. These materials need to have characteristics such as light weight, high strength, corrosion resistance and excellent thermal properties to meet the various needs of aircraft during flight. Common composite materials are glass fiber reinforced composites, carbon fiber reinforced composites and aramid fiber reinforced composites.
