Abstracts

Advanced materials for automotive manufacturing are helping automakers build lighter, more fuel-efficient vehicles. With the lighter and stronger steel, aluminum, and magnesium components, the current crop of cars and trucks can meet stringent crash safety standards, while also improving fuel economy to help achieve the more strict government Corporate Average Fuel Economy (CAFE) mileage requirements looming on the horizon.

Scope of the Report:

This report focuses on the Advanced Automotive Materials in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The usage of the advanced automotive materials market is to minimize the weight of the vehicle. Reducing the overall weight of the vehicle can help increasing the fuel efficiency and thereby limiting the carbon emissions in the environment.

Advanced high-strength steels (AHSS) are becoming much more widely deployed by automakers for structural parts where thinner, stronger metals not only help save weight, but also offer substantially improved crash protection.

The worldwide market for Advanced Automotive Materials is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
