According to our (Global Info Research) latest study, the global Advanced Autonomous Driving Domain Controller market size was valued at US\$ 11877 million in 2025 and is forecast to a readjusted size of US\$ 45389 million by 2032 with a CAGR of 19.4% during review period.

The advanced autonomous driving domain controller is the "brain" and "decision-making center" of an intelligent driving system, and a core component driving the evolution of autonomous driving from assisted driving to advanced autonomous driving. The domain controller centralizes the processing, fusion, planning, and decision-making functions of previously dispersed sensor data such as cameras and radar onto a unified hardware platform, significantly improving system integration, response speed, and decision-making efficiency. Architecturally, the advanced autonomous driving domain controller adopts a deeply coupled "hardware + software" design. At the hardware level, it typically employs a heterogeneous computing architecture, with a high-performance SoC responsible for AI inference and an MCU responsible for functional safety working together.

In 2025, global Advanced Autonomous Driving Domain Controller sales reached 9,234 K Units, with an average global market price of around 1,250 USD/Unit. Production capacity reached 15,000 K Units, with a gross profit margin of approximately 35%.
