According to our (Global Info Research) latest study, the global Advanced Biofuels market size was valued at USD 16580 million in 2023 and is forecast to a readjusted size of USD 69340 million by 2030 with a CAGR of 22.7% during review period.

Advanced biofuels, also known as second generation biofuels are the renewable fuels which are used as alternatives for gasoline and diesels with very low emission of the greenhouse gases. Advanced biofuels can be manufactured by using various types of biomass like, lignocellulose, non-corn starch & sugar. Advanced biofuels mostly uses the lignocellulose biomass for the production of biofuels.

The increasing global consumption of energy is demanding for more renewable and sustainable sources of energy. Advanced biofuels being environment friendly will be adopted by people across the globe. It can be used in automotive as well as aviation fuel in the near future as a sustainable alternative to traditional fuels. There are very few numbers of advanced biofuel manufacturers and it is expected there would be more manufacturers over the forecast period. Huge investments are being made by companies in R&D to develop technologies to convert biomass into advanced biofuels. The global advanced biofuels market is foreseen to register a promising two digit CAGR over the period of forecast.
