Abstracts

Advanced bipolar direct energy devices belong to a group of instruments in the electrosurgery sector that conduct high frequency alternating current through a patient's body to generate heat energy. The circuit is composed of an electrosurgical generator, an active electrode, a patient and a patient return electrode. Commonly, these instruments can be differentiated as monopolar or bipolar and can be used for cutting, coagulating, desiccating or fulgurating tissue.

Scope of the Report:

This report focuses on the Advanced Bipolar Direct Energy Device in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The use of bipolar electrosurgical devices to coagulate tissue prior to dissection is an effective and inexpensive method. Conventional devices such as staples and clips are commonly used for suture. Due to the high cost, repeated applications, and displacement problems associated with conventional devices, bipolar electrosurgical devices are preferred.

The worldwide market for Advanced Bipolar Direct Energy Device is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
