According to our (Global Info Research) latest study, the global Advanced Ceramic Composites market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Ceramic matrix composites are a type of composite materials that are composited with ceramics as a matrix and various fibers. The ceramic matrix can be high-temperature structural ceramics such as silicon nitride and silicon carbide. These advanced ceramics have excellent properties such as high temperature resistance, high strength and stiffness, relatively light weight, and corrosion resistance. Fibers can prevent cracks from expanding, thus obtaining fiber-reinforced ceramic matrix composites with excellent toughness. Ceramic matrix composites have excellent high temperature resistance and are mainly used as high temperature and wear-resistant products. Its maximum service temperature mainly depends on the characteristics of the substrate.
