Abstracts

For powdered medications, the hardness and abrasion resistance of the components used are major factors. For these applications, ceramic components are frequently combined with metal housings. We offer a broad spectrum of innovative solutions here as well. Ceramic bearings and dosage units are used in process tanks and bioreactors in the production of liquid medications. Low play between the piston and cylinder enables finely adjustable dosage amounts. Ceramics are used in development of highly sensitive substances at cryogenic temperatures, since they are highly mechanically stable even at temperatures of minus 200 °C.
