Abstracts

According to our (Global Info Research) latest study, the global Advanced Fibers market size was valued at US\$ 28782 million in 2025 and is forecast to a readjusted size of US\$ 47400 million by 2032 with a CAGR of 7.3% during review period.

Advanced fibers refer to a new generation of fiber materials developed through molecular design, innovative polymerization and advanced spinning & manufacturing technologies. They outperform conventional fibers greatly in strength, modulus, heat resistance, corrosion resistance, lightweight performance and functionality, featuring high added value, sophisticated technology and strategic application value.

Their prices vary widely: Carbon Fiber is priced at \$22,000-\$45,000 per ton, Aramid \$25,000-\$35,000 per ton, PBI over \$50,000 per ton, PPS \$8,000-\$15,000 per ton, High Strength Polyethylene \$3,500-\$40,000 per ton, and Glass Fiber \$800-\$2,500 per ton. The industrial chain includes upstream raw materials such as acrylonitrile, aromatic monomers and ultra-high molecular weight polyethylene resin as well as specialized equipment; midstream processes like spinning and carbonization to produce fibers and preregs; and downstream applications in aerospace, national defense, wind power, automobiles and safety protection. This industry is characterized by high-end positioning, high prices and technical barriers alongside robust market demand. China is accelerating domestic production to cut costs and enhance supply chain independence.
