Abstracts

According to our (Global Info Research) latest study, the global Advanced Liver Cancer Treatment Drugs market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The restrictive factors for the treatment of advanced liver cancer mainly include the following aspects:

Biological characteristics of liver cancer:

Liver cancer is a highly heterogeneous malignant tumor. Liver cancer cells in different patients differ in genes, proteins, and metabolism. This results in the limited efficacy of molecular targeted therapy targeting specific genes in liver cancer. At the same time, liver cancer cells are prone to metastasis and recurrence, which increases the difficulty of treatment.

Drug resistance of liver cancer cells: The resistance of liver cancer cells to chemotherapy drugs and targeted drugs is one of the important factors that restricts the effectiveness of drug treatment. Liver cancer cells can develop drug resistance through a variety of mechanisms, such as gene mutation, drug efflux, etc., which gradually weakens the effect of drug treatment.

Patient's physical condition: The physical condition of patients with advanced liver cancer has an important impact on the tolerance and effectiveness of treatment drugs. If the patient is frail and has low immune function, the side effects of treatment drugs may be more obvious and the treatment effect may be less effective.

Lack of specific therapeutic drugs: There are currently few specific therapeutic drugs for advanced liver cancer. Many drugs are inhibitors of certain pathways in liver cancer cells rather than directly targeting liver cancer cells. Therefore, these drugs may also be effective in other types of cancer, but are not specific enough in liver cancer.

Limitations of clinical trials: Currently, clinical trials of drugs for advanced liver cancer mainly use randomized controlled trials to compare the effectiveness and safety of different treatment options. However, because the conditions of patients with advanced liver cancer vary greatly, the treatment effects and survival times of different patients may vary greatly, which brings certain uncertainty to the results of clinical trials.
