## Abstracts

The global Advanced Oxidation Process (AOP) System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ultraviolet (UV) oxidation is a damaging process that oxidizes organic contaminants in water. It works by adding oxidants such as ozone (O<sub>3</sub>) or hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>) to contaminated groundwater. The contaminated solution passes through a chamber and is exposed to intense UV radiation. UV radiation is provided by UV light bulbs. Oxidation of target pollutants is caused by direct reaction with oxidants and the action of ultraviolet light combined with ozone and/or hydrogen peroxide.

This report studies the global Advanced Oxidation Process (AOP) System production, demand, key manufacturers, and key regions.
