Abstracts

Advanced renal cell carcinoma is associated with a type of kidney cancer that appears in the covering of the proximal complex tubule. The convoluted tubule is a very small part of tubes in the kidney that helps in transportation of unwanted particles from the blood to the urine. Advanced renal cell carcinoma is the most common type of kidney cancer in adults that represents nearly 2-3% of all cancer cases in adults. The disorder is asymptomatic in advanced renal cell carcinoma at initial stages that results with people often in the advanced stages of the disease by the time it is discovered. The initial symptoms of renal cell carcinoma are a general feeling of being unwell, hypertension, flank pain, weight loss, fever, blood in the urine, night sweats, and a mass in the abdomen. Management of renal cell carcinoma has seen significant development in the past few years, and new approaches are being established. Advanced renal cell carcinoma is a disease that normally cannot be treated by general therapy and is challenging to treat. Surgical removal of one or both kidneys should be considered in patients who suffer from metastatic disease before systemic therapy.

SCOPE OF THE REPORT:

This report studies the Advanced Renal Cell Carcinoma Therapeutics market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Advanced Renal Cell Carcinoma Therapeutics market by product type and applications/end industries.

Increase in aging population is one of the major factors driving the revenue growth of the renal cell carcinoma market. Furthermore, renal cell carcinoma is a rare disease with a small patient-base constituting all ages from infants to older adults. However, the

disease is predominantly noted in age group of ~ 60-70 years, exposing a higher probability of occurrence. Expanding research into orphan drugs is a factor projected to create lucrative revenue potential for drug makers of renal cell carcinoma. Restraints include lack of technological advances in genome sequencing, stagnant number of diagnosed population base and low patient awareness levels among others. The disease pattern of renal cell carcinoma disease is also affected by the genomic alteration, changes in lifestyle etc. Other inevitable restraints include lack of product availability on specific diseases & target indications apart from feeble pipeline. The global Advanced Renal Cell Carcinoma Therapeutics market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
