## Abstracts

According to our (Global Info Research) latest study, the global Acrylic Acid Derivatives market size was valued at USD 572.5 million in 2023 and is forecast to a readjusted size of USD 835.6 million by 2030 with a CAGR of 5.6% during review period.

Acrylic acid derivatives are important raw materials for the manufacture of a wide variety of industrial and consumer products. In the theme of sustainability, more economical methods that utilize cheaper and less toxic feedstock are urgently needed. Clean pathways can be realized through the direct functionalization of CO<sub>2</sub>, which plays a dual role of reducing the CO<sub>2</sub> emission rate and producing chemicals with added value. Because ethylene is one of the most abundant industrial feedstocks, manufacturing acrylic acid and acrylates directly from CO<sub>2</sub> and ethylene becomes both scientifically fascinating and industrially relevant. As a dream reaction in catalysis and CO<sub>2</sub> utilization, this challenging transformation has drawn close attention for nearly 40 years. With continuous efforts from both academia and industry, scientists are getting close to realizing an effective catalytic system. This review covers critical discoveries and discusses possible future directions in this area.

The report segments the market by derivative (acrylic esters- methyl, ethyl, butyl, 2-ethylhexyl acrylate, polymers—acrylic elastomers, superabsorbent polymers, WTP), and application (surface coatings, adhesives & sealants, textile, detergents, plastic additives, diapers & training pants, adult incontinence, water treatment, and others),
