Abstracts

The global Advanced X-Ray Inspection System (AXI) in PCB market size is expected to reach \$ 618 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

In 2025, global Advanced X-Ray Inspection System (AXI) in PCB production reached approximately 2,305 units, with an average global market price of around K US\$ 147.81 per unit.

X-ray inspection equipment can perform comprehensive inspection of PCBs, detecting defects not only on the PCB surface but also within the PCBA itself. This inspection method is highly precise, capable of detecting minute defects and deformations, and is more reliable and accurate than traditional visual and mechanical inspection.

In the electronics manufacturing industry, X-ray inspection equipment has become a commonly used inspection tool. It can be applied to various types of PCBs, including single-layer, double-layer, and multi-layer PCBAs, as well as various types of electronic components such as chips, capacitors, and inductors. X-ray inspection equipment is also used in the assembly and repair of electronic products to ensure their quality and reliability.

In this report, Advanced X-Ray Inspection System (AXI) in PCB primarily refers to X-ray inspection equipment used in PCB electronic manufacturing.

Advanced X-Ray Inspection System (AXI) in PCB refers to non-destructive inspection systems used for printed circuit boards (PCB) and assembled boards (PCBA/SMT). A typical system integrates a microfocus/high-power X-ray source, high-resolution detectors, precision motion and radiation shielding, plus reconstruction and automated defect-recognition software to deliver volumetric ?inside-the-product? evidence without damaging the sample. On the PCB fabrication side, it supports internal layer verification, registration shift analysis, and blind/buried microvia formation and fill quality checks for multilayer, HDI and substrate boards. On the assembly side, it focuses on hidden solder-

joint integrity for BGA/QFN and similar packages? voiding, insufficient solder, bridging, foreign materials and cracks. Compared with AOI (surface-oriented), X-ray inspection expands quality control to internal failure mechanisms that drive field returns in high-reliability applications such as AI servers, high-speed networking and automotive electronics, making it a foundational tool for process release, failure analysis and yield closed-loop improvement.

Production model: dominated by a ?platformized modules + application-engineering delivery? model. OEMs standardize the tube/detector/motion/shielding and industrial control architecture, then configure board size, takt time, resolution, defect libraries and traceability interfaces per customer; delivery is gated by metrology calibration, radiation safety compliance, process validation and MES/QMS connectivity. Market leaders differentiate through platform upgrades for larger boards and more complex structures, and through algorithm evolution that reduces false calls under scattering/artefacts. Gross margin: typically ~35%?55% as a blended mix of hardware platform, software/AI licensing and recurring service/spares; margins trend higher with stronger 3D/tomosynthesis capability, richer software value and high-throughput large-format platforms (industry-tracking estimate).

Value chain: upstream (X-ray tubes & HV, flat-panel detectors, motion & shielding materials, industrial computing and AI/reconstruction); midstream (system integration, reconstruction/defect analytics software, applications engineering and service); downstream (PCB fabrication?multilayer/HDI/substrates, EMS/SMT lines, data-center and automotive electronics manufacturing, and FA/3rd-party labs).

Market Development Opportunities & Main Driving Factors

AI infrastructure is pushing PCB toward higher layer counts, denser interconnect, lower loss materials and stricter reliability. Brokerage research highlights high-end PCB (high-layer, HDI and substrates) as a structural growth engine, with application-driven requirements moving materially upward. As complexity rises and hidden defects become more costly, X-ray inspection shifts from a sampling tool to a yield-and-reputation moat?quantifying solder integrity in PCBA while providing earlier process evidence for internal structures and registration in PCB fabrication, effectively moving quality risk detection upstream.

Market Challenges, Risks, & Restraints

Competition is a systems game: imaging physics, mechanical precision, algorithm industrialization and compliant delivery. Stable tubes/detectors and precision motion demand supply-chain consistency; automated judgement and 3D reconstruction require high-quality labeled data, process priors and sustained application engineering, creating ?cold start? and misclassification risks when scaling across customers. Annual-report disclosures also indicate ongoing upgrades for larger-format inspection, tomographic angles and reconstruction techniques, reflecting the real-world difficulty of artefacts and

shading in dense assemblies. Meanwhile, tighter radiation safety, metrology and quality documentation requirements along with government mechanisms promoting PCB industry standardization and upgrading raise the bar for compliance and end-to-end quality evidence.

Downstream Demand Trends

Demand is moving from seeing defects to quantifying defects and closing the loop. For AI-server and high-speed networking boards, customers increasingly care about statistical distributions (e.g., voiding profiles), anomaly patterns and batch traceability, accelerating deeper integration between AXI and MES/quality data platforms and pushing AI inspection from assisted review toward automated disposition and root-cause feedback. In parallel, larger boards and denser packaging drive requirements for wider field-of-view, higher throughput, and stronger tomographic/3D capability. Annual-report R&D directions large-format adaptation, tomographic reconstruction and low-dose imaging signal the industry's path toward higher reliability and stronger engineering deployment.

Global key Advanced X-Ray Inspection System (AXI) in PCB players cover ViTrox, Viscom, Nordson, Omron, Unicomp Technology, NIKON, Waygate Technologies (Baker Hughes), Comet Yxlon, Test Research Inc. (TRI), Seamark ZM, Zhengye Technology, ZEISS, Saki Corporation, XAVIS Co., Ltd., SEC, Techvalley, Goepel Electronic, Scionscope, SXRAY, Creative Electron, etc. In terms of revenue, the global three largest companies occupies a share nearly 39% in 2025.

This report studies the global Advanced X-Ray Inspection System (AXI) in PCB production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Advanced X-Ray Inspection System (AXI) in PCB and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Advanced X-Ray Inspection System (AXI) in PCB that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Advanced X-Ray Inspection System (AXI) in PCB total production and demand, 2021-2032, (Units)

Global Advanced X-Ray Inspection System (AXI) in PCB total production value, 2021-2032, (USD Million)

Global Advanced X-Ray Inspection System (AXI) in PCB production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Units), (based on production site)

Global Advanced X-Ray Inspection System (AXI) in PCB consumption by region & country, CAGR, 2021-2032 & (Units)

U.S. VS China: Advanced X-Ray Inspection System (AXI) in PCB domestic production, consumption, key domestic manufacturers and share

Global Advanced X-Ray Inspection System (AXI) in PCB production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Units)

Global Advanced X-Ray Inspection System (AXI) in PCB production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Units)

Global Advanced X-Ray Inspection System (AXI) in PCB production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Units)

This report profiles key players in the global Advanced X-Ray Inspection System (AXI) in PCB market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include ViTrox, Viscom, Nordson, Omron, Unicomp Technology, NIKON, Waygate Technologies (Baker Hughes), Comet Yxlon, Test Research Inc. (TRI), Seamark ZM, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Advanced X-Ray Inspection System (AXI) in PCB market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), volume (production, consumption) & (Units) and average price (K US\$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
