According to our (Global Info Research) latest study, the global Acrylic Surface Coating market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Acrylic surface coatings are fast-drying paints comprising pigments suspended in acrylic polymer emulsion. These coatings are made up of a methacrylic or acrylic polymer that possesses strong color retention property. Acrylic coatings are soluble in water; however, they become water-resistant in the dry state. Different technologies used in acrylic surface coatings include waterborne coating, solvent-borne coating, and powder coating. Acrylic surface coatings are characterized by properties such as high surface hardness and elastomeric finish when applied as roof coating on buildings.

Among the various applications, the construction segment held the largest share in the global acrylic surface coating market.
